DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13 and 19, drawn to a paper feeding apparatus, classified in class 271, subclass 9.09.
 - II. Claims 14-18, drawn to a computer-readable storage medium, classified in class 360, subclass 131.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has separate utility such as a computer-readable storage medium storing a control program to control a number of different types of image forming devices including a manual feed tray and/or a stopper and/or a feed control device. See MPEP § 806.05(d).

The manner in which claims 14-18 are written does **not** limit such claims to only the apparatus set forth in claims 4, 10, 11, 12 or 13, respectively. Rather, claims 14-18 set forth **intended use**. For example, claim 14 recites, "A computer-readable storage medium storing thereon a control program executable by a processor **for** controlling the

Art Unit: 3653

paper feeding apparatus according to Claim 4". (emphasis added). The recitation "**for** controlling the paper feeding apparatus according to Claim 4" is a statement of intended use. Similarly, claims 15, 16, 17 and 18 recite "A computer-readable storage medium storing thereon a control program executable by a processor **for** controlling the image formation according to Claim 10", "A computer-readable storage medium storing thereon a control program executable by a processor **for** controlling the image formation according to Claim 11", "A computer-readable storage medium storing thereon a control program executable by a processor **for** controlling the image formation according to Claim 12", and "A computer-readable storage medium storing thereon a control program executable by a processor **for** controlling the image formation according to Claim 13", respectively. **The examiner will withdraw this restriction requirement if applicant responds to this restriction requirement with an amendment that deletes the term "for" in each of the claims 14, 15, 16, 17 and 18.** As one example, applicant can amend claim 14 to positively recite "A computer-readable storage medium storing thereon a control program executable by a processor **for** controlling the paper feeding apparatus according to Claim 4". This positively recites a processor controlling the paper feeding apparatus according to claim 4. Thus, this amendment requires the apparatus of claim 4. Similar amendments would also need to be made in each of the other claims 15-18.

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the

Art Unit: 3653

allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
